Akative

Akative™ Hotspots

Easy 4G Hotspots to Connect Students Anywhere

Internet Hotspot for Connected Learning

The technology you use to orchestrate your online classroom either makes or breaks your teaching effectiveness. One thing to consider is making sure you're using the best connectivity, designed with remote students in mind, to make your distance programs more effective.

It's uncertain how long schools may require students to stay at home. Akative's 4G hotspot Internet solutions are designed to support our nation's school districts as they implement or expand their distance learning initiatives during this difficult time.

Easy Access Wherever Education Takes Place

Akative hotspots provide students with secure Internet access anytime and anywhere they need it. With simple, safe content filtering, our 4G hotspots have the connectivity your students need to have a wireless Internet connection for successful distance learning. As distance learning has become the new normal, all students need some level of stable connectivity for class and homework.

Our focus is to help you close the gap in education by providing 4G hotspots to students that have limited or no connectivity options at home.
