- ✓ Fixed Monthly Cost
- ✓ Secure, PCI Compliant Solution

RocketFailover POS-Unlimited™

Fixed-Cost Failover For POS Systems

Our fixed-fee, automatic failover keeps Point-Of-Sale (POS) systems online and helps uphold the security of your PCI compliant point-of-sale network. RocketFailover POS-Unlimited is built with PCI compliant architecture to ensure network security and 24/7 connectivity.

POS-Unlimited is a fully managed service that includes everything you need to quickly and effectively implement an automatic, high-speed 4G failover connection for your point-of-sale systems. It includes:

- Right-sized firewall
- Cellular modem
- iStatus network monitoring
- All required cables

When your primary connection is lost, POS-Unlimited automatically routes your POS, whitelisted traffic to your 4G connection. Once your primary connection is restored, the traffic is automatically routed back to the primary connection.

By automatically routing traffic for you, POS-Unlimited seamlessly keeps your POS systems online and reduces the amount of data used. In addition, your POS network stays secure by using web filtering to ensure that only whitelisted traffic is permitted to and from the POS network.

Key Features

- Fully managed, preconfigured hardware including a multi-VLAN firewall
- All configuration labor included for both firewall and cellular modem
 - Developed to your network requirements
 - Ongoing changes and/or additions such as (LAN Segments/VPN tunnels/traffic shaping/etc.)
- 4G modem and failover data
- iStatus network monitoring
